ADJUSTABLE PIVOT MECHANISM

The opening and closing of the door takes place by means of a vertical pivot, i.e. two pins placed at the ends, which are adjustable and concealed. The leaf, by turning on itself, allows a wider opening and greater brightness.

ALLUMINUM COVERING PROFILES

The aluminum finish in brushed steel covers the frame and the door profile. No screw is visible, a special feature that guarantees a thorough cleaning and refined aesthetics.

COPLANARITY OF THE DOOR

The pivot opening allows the perfect coplanarity between the door and the wall. Everything is integrated in the door leaf, including handle

FLUSH WITH THE WALL

The leaf flush with the wall allows a perfectly cleaned shape.

INSTALLATION AND MAINTANANCE KIT

With the mounting kit, the installer receives the building site key sealed in its box, the fitting instructions, as well as the accessories and hardware. The purchaser receives, included in the standard supply, the cloth, cleaning products and all the necessary items to keep Synua always under perfect conditions.

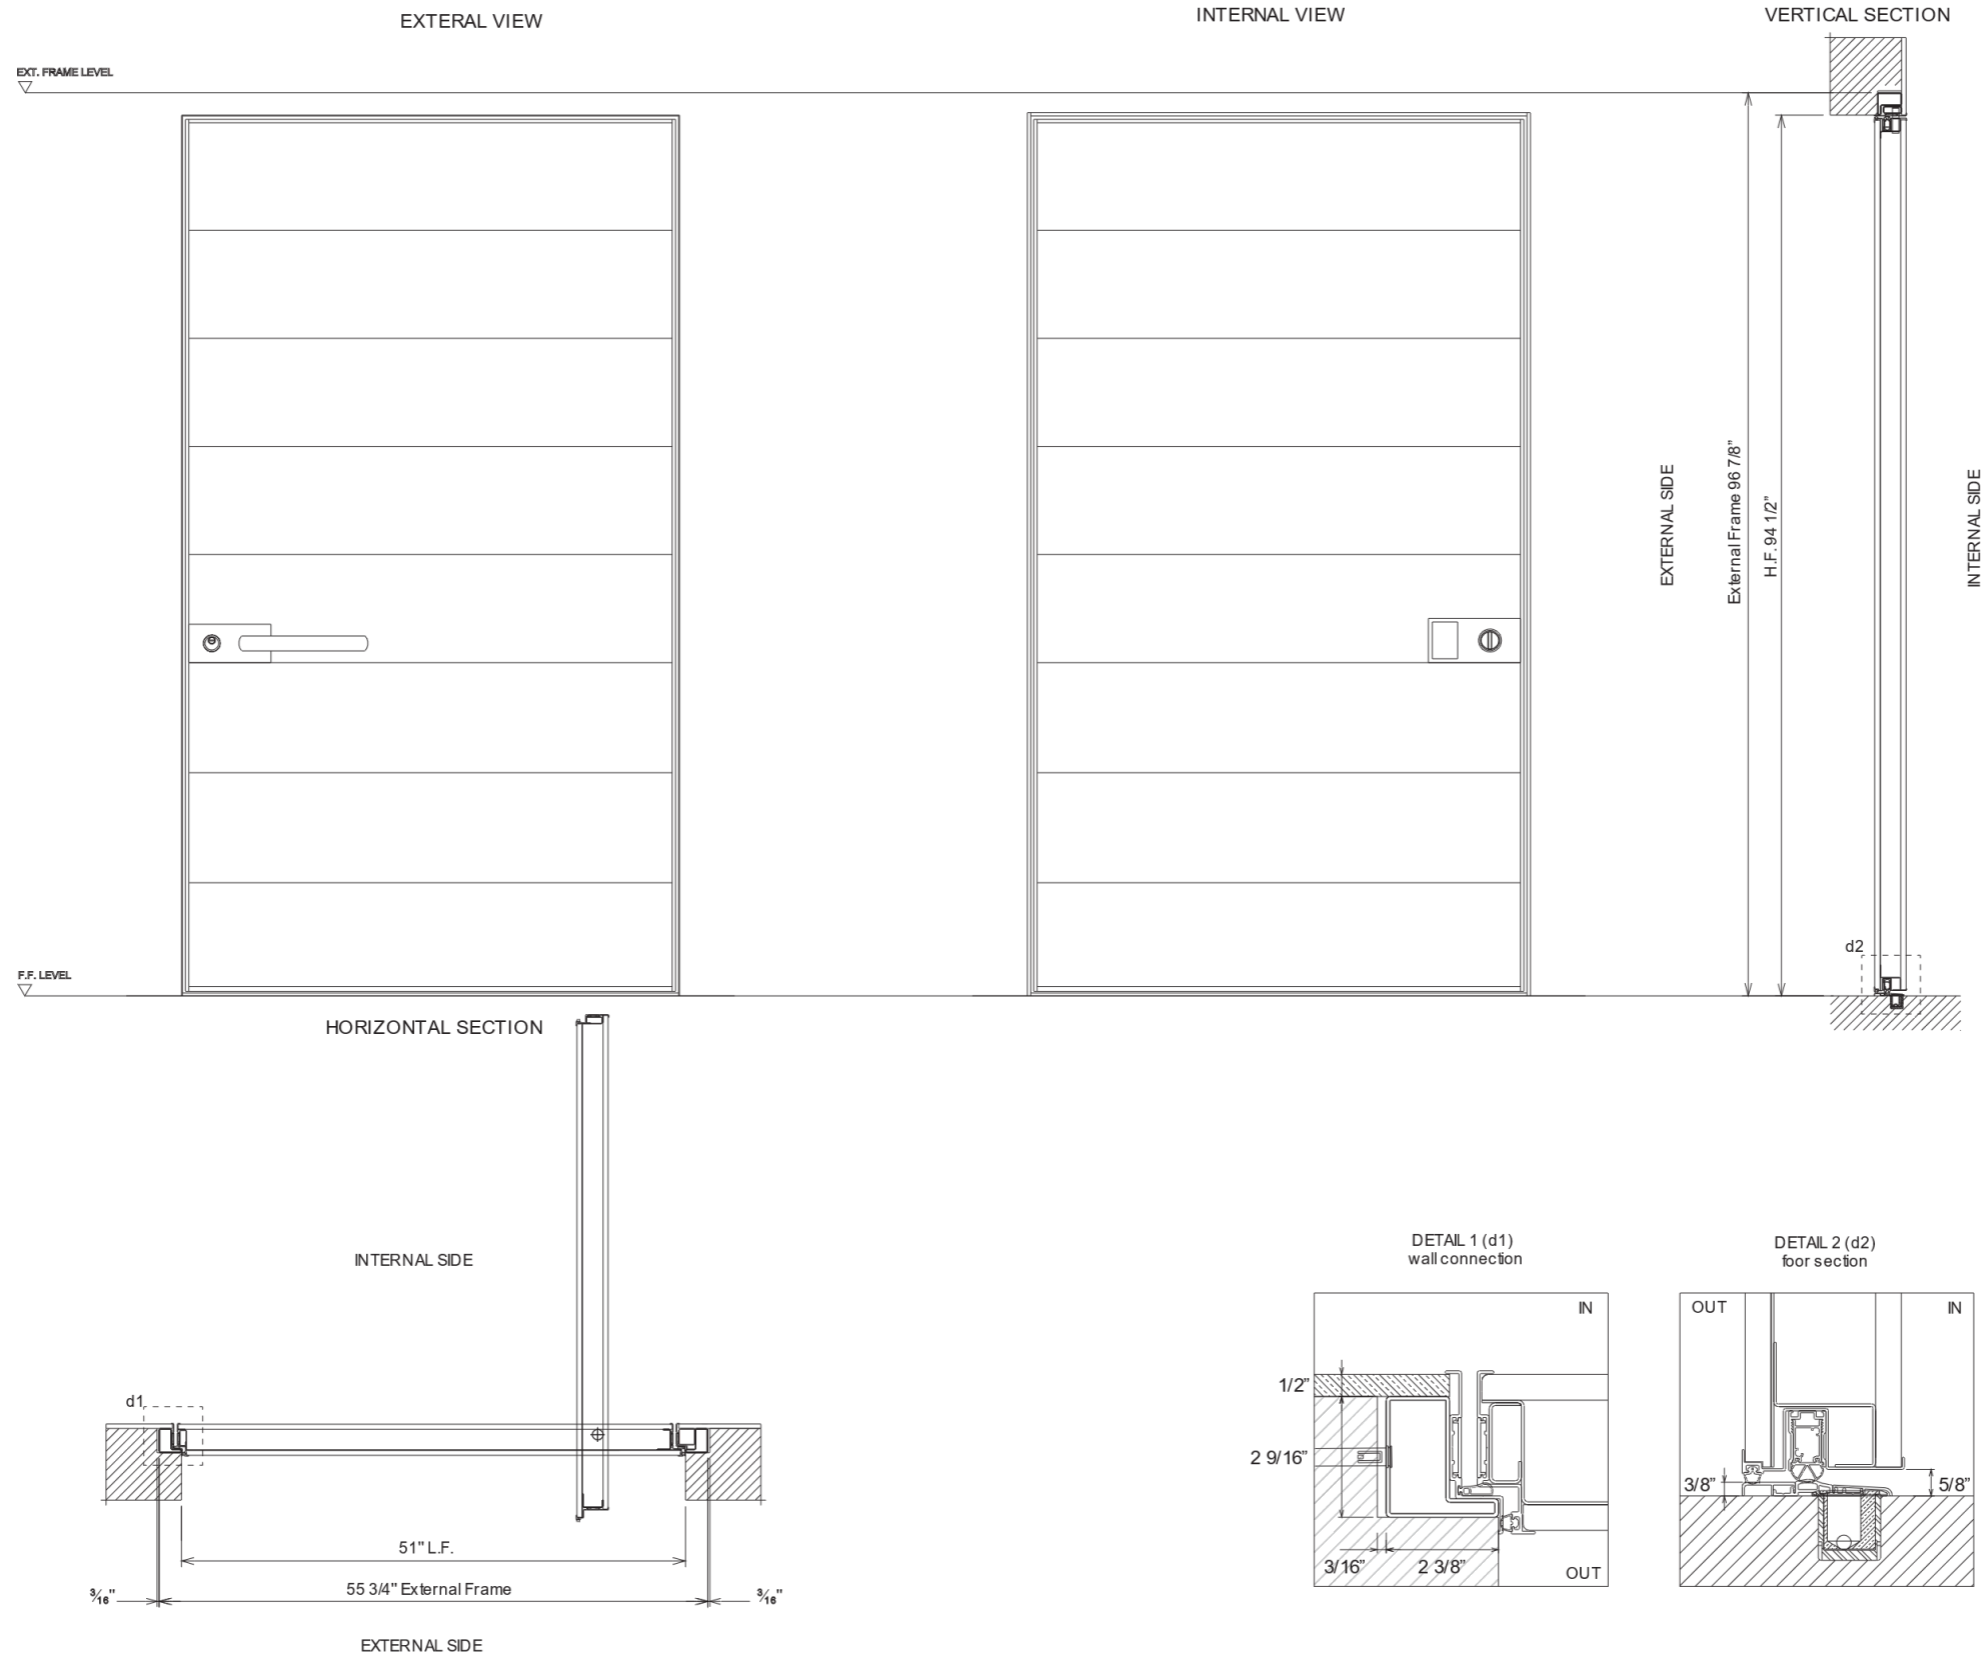

OWNER'S KEYS

All Oikos doors are supplied with a building site key to be used for the production checks and by the technical staff entrusted with the installation, as well as with the owner's keys, sealed inside a special box.

DOOR PANEL OPTIONS

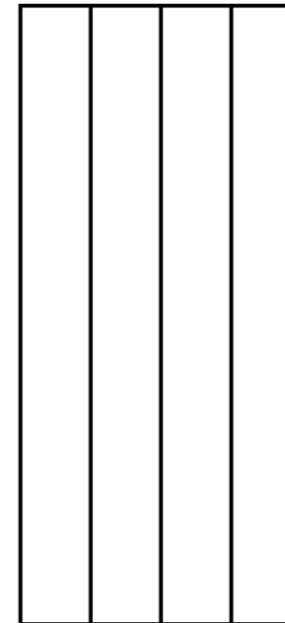

Available as NOA hurricane rated and 120min UL fire rated
Paneling material is available for interior and exterior installation.

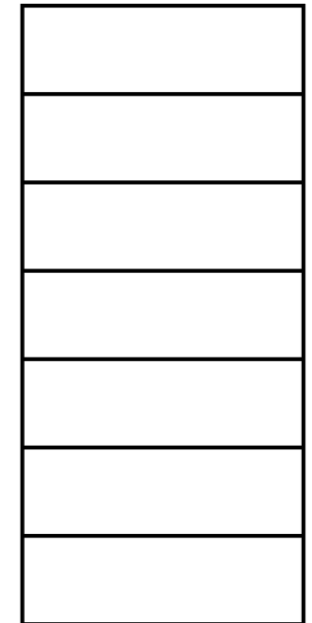

SOLID

VERTICAL

HORIZONTAL

Finish materials:
Wood, lacquers, glass, metal, porcelain and others
(See finishes pages)

COMPOSITION EXAMPLES

FINISHES AVAILABLE:

WOOD, LACQUERS, GLASS, METAL, PORCELAIN AND MORE

* Sidelights by others

(See following pages for finishes)

Long handle

The further enrich the door, it is possible to customize on the outer side by choosing the long handle made of steel. Installed vertically or horizontally.

Short handle

The external handle can be added in its short version, too. Installed vertically or horizontally.

Recessed handle

In the version with recessed handle the opening from inside may also take place by the rotation of the original knob.

Single action lever

An alternative to the recessed handle is the single action lever for the interior. Single action lever for exterior side available with mechanical lock only.

ELECTRONIC LOCKING SYSTEM

Easy version: Battery operated, no on-site wiring work needs to be carried out.

Full version: Preset for connection to the low voltage mains supply and is compatible with all opening systems.

Simple because it can be used even without any pre-arranged electrical system.
Smart because it can be operated using transponder key, keypad, and radio control.

Secure because locking of the door takes place automatically just by its being pulled to.

Convenient because it is possible to control several entrances with a single radio control: gate, up-and-over door, door.

Generous because it can be connected to a burglar alarm system or to the domotic control for a smart house management.

OPENING FROM OUTSIDE

- With transponder

- with radio control

- with keypad

- with mechanical key

OPENING FROM INSIDE

- with button

- with remote control

- with cylinder knob

Arckey

An access control system, integrated in safety doors, managed through the Tech App for smartphones, and equipped with an electronic opening system.

PIN Keypad

The leaf opening can take place by storing a PIN code on a dedicated numeric keypad.

Power Supply Transformer

*Required for home automation control

*

ELECTRONIC LOCK OPTIONS

Card

The Security Code System consists of three cards subject to progressive deactivation that allow the administrator to always have the control of the secret code for accessing the Oikos Tech App programming.

Finger Print Reader

Use this option for quick access using your fingerprints. The fingerprint reader is harmoniously inserted in the door and coordinated with the accessories already installed.

Smart Home Control Sensor

*Required for home automation control

*
