ST10 - CHEST OF DRAWERS

LAURAMERONI
design . collection

Chest of drawers entirely clad with metal strips of various finishes such as satin brass, burnished brass, satin copper, burnished copper, polished steel and black iron "cenere".

The chest of drawers, as well as the entire Stars collection, has been conceived with the desire to create a product with a unique and contemporary design that can enhance the craftsmanship of the finest metals. It was designed to meet the needs of a clientele that is looking for a unique piece: a sequence of strips of different metals and sizes are processed and brushed by hand to obtain unique and unrepeatable shades of color.

A skilled craftsmanship that interacts and enhances the rigorous design of the structure to create a chest of drawers that can express the concept of luxury and elegance.

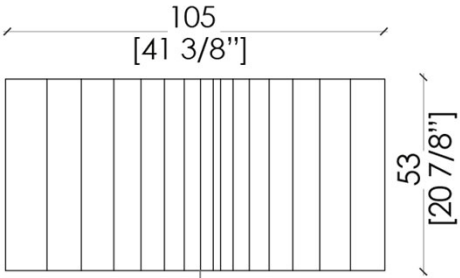

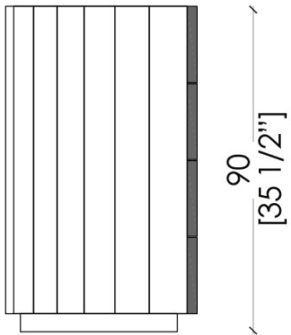

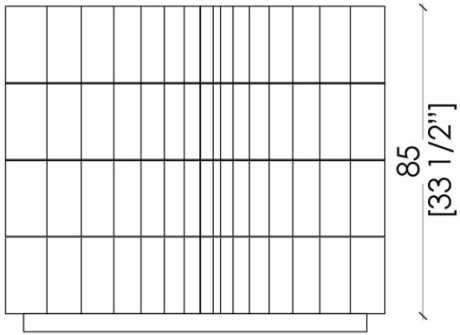

The uniqueness of the chest of drawers lies in the choice of a minimalist design and proportionate volumes that highlights the unique craftsmanship of the surface characterized by unusual sequences of precious metals.

The precise and meticulous attention to matching and aligning all the various metals makes the surface incredibly smooth and gives the feeling that the metals are in perfect fusion with each other.

An architectural masterpiece that interprets the space that surrounds it with elegance and originality, giving brightness through the strips of precious metals that mark its surface.

The thin and functional metal sheet that acts as a handle is in perfect harmony with the essential geometric lines of this chest of drawers.
